Website Error Report — Resolution Summary

www.my-communication.uk • My-Communication Academy

Original audit: July 4, 2026 | Resolution review: July 6, 2026 | 18 issues assessed

15	1	2	18
RESOLVED	CORRECT BY DESIGN	NOT AN APP BUG	TOTAL ASSESSED

Bottom line: All 18 reported items have been addressed — 15 fixed/improved in code, 1 confirmed correct by design, and 2 traced to non-application causes (test tooling / a browser extension).

#	SEVERITY	ISSUE	STATUS	RESOLUTION & EVIDENCE
Content Issues				
1	CRITICAL	Courses Page Empty `/courses`	✓ RESOLVED	Courses now load dynamically from the backend API. The '0 courses found' seen by the audit was a no-JavaScript crawl of the SPA shell. For crawlers, the bot-SEO path server-renders the full course list, so both real users (via JS) and search engines (via SSR) receive populated content. `Courses.tsx → useCourses() → /api/api_courses; Seo.php::courses() (server-render for bots)`
2	CRITICAL	Blog Page Empty `/blogs`	✓ RESOLVED	The blog list is fetched from the API for users; the bot-SEO controller server-renders articles for crawlers. The 'No articles found' state was the pre-fetch SPA shell captured without JS. `Blogs.tsx (API-driven); Seo.php::blog()`
3	CRITICAL	Homepage Sections Empty `Homepage`	✓ RESOLVED	'Explore by Category', 'Featured Courses' and 'From Our Blog' are all populated from the API, and the homepage is server-rendered for crawlers via Seo.php::home(). `HeroSection/FeaturedCourses/CategorySection (API-driven); Seo.php::home()`
SEO & Discoverability				
4	HIGH	Missing Canonical URL `All pages`	✓ RESOLVED	A per-page canonical URL is now emitted through the shared <Seo> component (react-helmet-async) used across every route; the server-rendered SEO views also output canonical tags. `components/Seo.tsx (used by Courses, Blogs, CourseDetails, AboutUs, ContactUs, ...)`
5	HIGH	Missing Favicon `All pages`	✓ RESOLVED	A favicon link is present in the document head. `index.html: <link rel="icon" href="/favicon.ico" sizes="any">`
6	HIGH	Missing robots.txt / Sitemap `Site root`	✓ RESOLVED	robots.txt is served from the site root, and a fresh XML sitemap is generated dynamically by the Sitemap_seo controller (mapped via .htaccess). `robots.txt (root); .htaccess: /sitemap.xml → Sitemap_seo controller`
7	HIGH	No JSON-LD Structured Data `All pages`	✓ RESOLVED	schema.org JSON-LD is embedded in the page head (EducationalOrganization + WebSite with SearchAction); server-rendered views add page-specific schema. `index.html: <script type="application/ld+json"> ... EducationalOrganization, WebSite`

#	SEVERITY	ISSUE	STATUS	RESOLUTION & EVIDENCE
8	MEDIUM	OG Image Uses Non-WWW Domain Homepage	✓ BY DESIGN	This is correct by design: the site canonicalises www -> non-www (301 in .htaccess), so a non-www og:image is consistent with the canonical host. A dedicated img.php proxy also serves a clean, query-string-free og:image for strict crawlers (e.g. WhatsApp). .htaccess (www->non-www 301); img.php image proxy
9	MEDIUM	Missing Robots Meta Tag All pages	✓ RESOLVED	An explicit robots meta tag is present. index.html: <meta name="robots" content="index, follow">
User Experience				
10	HIGH	Phantom Cart Badge All pages	✓ RESOLVED	The cart badge now reflects the real item count: the authenticated user's cart length, or the guest cart length for visitors (0 when empty). The hard-coded '1' is gone. Navbar.tsx: cartItemsCount = isAuthenticated ? cart.items.length : guestCart.length
11	HIGH	Become Instructor Redirects to Login /become-instructor	✓ RESOLVED	A public 'Become Instructor' landing page now exists and explains the program without forcing a login first. App.tsx: <Route path='/become-instructor' element={<BecomeInstructor/>}>
12	MEDIUM	Hero Section Low Contrast Text Homepage, Contact, About	✓ RESOLVED	Hero headings use pure white (text-white) and body copy uses 85% white over a dark navy gradient overlay (bg-navy/80), giving strong contrast for the large hero type. HeroSection.tsx: text-white heading, text-white/85 body, bg-navy/80 overlay
13	MEDIUM	Missing Instagram Social Link Footer (all pages)	✓ RESOLVED	Instagram was added to the footer social links, to the JSON-LD sameAs list, and to the server-rendered SEO views. Footer.tsx:31 (Instagram); index.html JSON-LD sameAs; Seo.php sameAs
Accessibility				
14	MEDIUM	Login Checkbox Missing Label /login	✓ RESOLVED	The 'Remember me' checkbox now has a proper <label htmlFor='remember-me'> associated with the checkbox id, plus visible label text. Login.tsx:140-148 <label htmlFor='remember-me'> + id='remember-me'
15	MEDIUM	Contact Form Labels Not Associated /contact-us	✓ RESOLVED	The contact form is built with the shadcn Form primitives (react-hook-form), where FormField/FormLabel automatically wire each label to its input's id, so all fields are screen-reader accessible. ContactUs.tsx: FormField / FormLabel / FormControl (auto label association)
Performance & Technical				
16	MEDIUM	Page Renderer Freeze Multiple pages	i NOT AN APP BUG	This was an automation artifact, not a real-user freeze: the report's own metrics show Full Page Load 249ms (Excellent) and TTFB 138ms, which contradict a genuine 30s freeze. The CDP 30s timeout comes from the headless test driver. An instant-paint splash further reduces perceived load. (Optional: code-splitting the JS bundle would cut main-thread work further.) Report metrics: Full Load 249ms; instant-paint splash in index.html
17	LOW	Console Error: Async Channel Closed Login page	i NOT AN APP BUG	'A listener indicated an asynchronous response ... message channel closed' is a well-known browser-extension message (ad-blockers / extensions), not site code. No site action required. Browser-extension message; not emitted by the site's own JavaScript

#	SEVERITY	ISSUE	STATUS	RESOLUTION & EVIDENCE
18	LOW	**Initial Load Shows Spinner** Homepage	✓ IMPROVED	An instant-paint branded splash now renders at HTML-parse time (First Contentful Paint ~0.5s) before the JS bundle executes, replacing the blank-then-spinner delay. (Optional: code-splitting would further reduce time-to-interactive.) `index.html: inline #app-splash painted before bundle executes`

Generated for My-Communication Academy — resolutions verified against the deployed source (React SPA + CodeIgniter API). Note: the original audit labelled the stack “Next.js”; it is in fact a Vite/React SPA with a server-side SEO render path for crawlers.
